CRIPTOMOEDAS

Cryptocurrency is a digital asset designed to function as a means of trades that uses encryption to ensure more security in transactions

financial,

ensuring the validity of the transactions, and

control the creation of new units currency through Blockchain technology. Unlike fiat currencies, the cryptocurrency, can not be controlled by any central authority, moreover, can not be

Fake or reversed

arbitrarily by the sender. This provides numerous safety advantages over traditional forms of currency

Executive Summary

The EDcash is positioned in the market as a solution for developers who work with their odd jobs and play a key role in creating projects for companies, our proposal is quite innovative because it will resolve the means of payments to these professionals by receiving Crypto currencies as EDcash. a currency trading platform where the programmer can choose to exchange their currencies for currency or even withdraw their currencies will be created.

Main objective of EDcash is to value the services created by these professionals and pays them according to work done.

The EDcash proposes the following solutions:

- Creating a classified platform where developers will advertise their services to the general public
- Payment in EDcash currency to services for the currency has a wide circulation in the trade in general
- Higher yield to these professionals who both struggle in favor of companies

EDCASH

O which is EDcash?

It is a coin with the same utility of real or dollar, the difference is that it is totally digital is not issued or controlled by any bank or authority government, and its value is determined freely

by supply and demand in the market,

This decentralized digital currency is designed for the community, to be used as a form of payment in services offered by the developers.

Payments made with Edcash (EDC) happen directly between users anywhere in the world without need for banks and instantly. decreasing taxes to be paid, since there is no intermediary responsible the rates in the middle desseprocesso.

O EDCash that brings to the market?

The EDCash aims to revolutionize the market Criptomonedas in Brazil enabling users easier access, fast and safe access to tools and environments linked to the use of the currency in question.

The EDCash, plans to enter a market to provide for the needs of users for the use of crypto for commercial transactions involving purchase and sale transactions of products offered by sales channels such as classifieds, online stores etc.

We will achieve the class of developers, because we have the intention to value these professionals both battle for many companies to succeed,

Conclusion:

We enable everyone the opportunity to enter the market criptomonedas, generating multiple possibilities of investment in this innovative market.

2019

- Listing Exchange
- guide the creation of start for programmers

QT2
2019

- Product launches EDCash
- Sites for sales of products EDCash
- Platform Classifieds

QT3
2019

- Exchange Launch EDCash

Masternodes

The concept of Masternodes started gaining popularity thanks to cryptocurrency **Dash**. It is quite interesting to see the Masternodes form an integral backbone network. Operators receive monetary rewards for running nodes in the network, but they also need to provide own financial contribution. It is because of this, we looked more carefully about what Masternodes involve exactly and why this concept has become so popular.

ROI

The term ROI is an acronym for the English expression "Return over Investment" or "Return on Investment". Through this indicator, it is possible to know how much money the company is gaining (or losing) with each investment.

This includes everything that is done aiming at some future profit as marketing campaigns, sales training, acquisition of management tools, new customer retention strategies, etc.

Thus, it is clear not only what investments are worth, but how to optimize those who are already working, so that they perform better.

ROI calculation

$$\text{ROI} = \left(\frac{\text{RECEITA} - \text{CUSTO}}{\text{CUSTO}} \right) \times 100$$

Conclusion

This white paper presented the development of a new cryptocurrency called EDCASH (EDC). The focus of this cryptocurrency will serve as a means of payment in the arranged services for a range of programmers is cryptocurrency it creates an easier infrastructure for use in business, classifieds, as well as revenue generation.

We see EDCASH (EDC) as a unique and positive investment opportunity that should be capitalized immediately to generate all the benefits available.
